

#### CHECK CABLE LENGTH

Two people with push brooms can raise the cable to ceiling as indicated in the sketch. Do this while cable is plugged into car and attached to the wall. If there is slack in the cable, it should be long enough to work with EV Cable Glide.

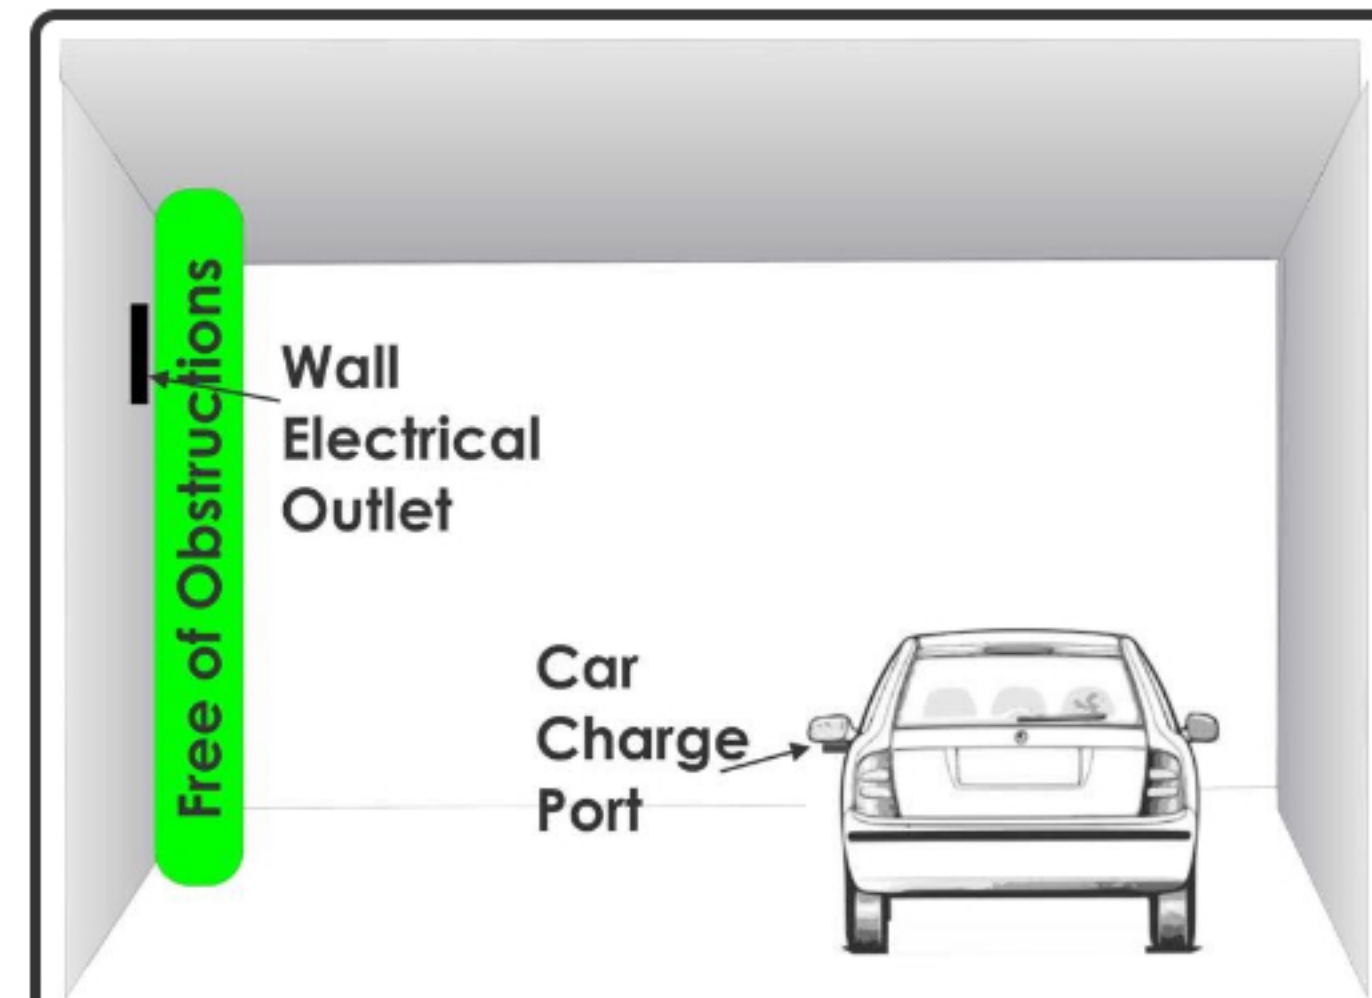

If you are in doubt, [email us](#) — we are prepared to help.

#### CHECK CEILING

Sight along ceiling from your car's charge port to the location of your Electrical Outlet.

If there is nothing in this path, EV Cable Glide should work nicely.

#### CHECK WALL

Check the wall at the electrical outlet.

It needs to be free of obstructions from ceiling to floor.

If you have this clear space, EV Cable Glide should work nicely.
